Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15, 19-33, and 36-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over **[Thomas or Taylor] in view of Hjertman, et al., and Kling**. The Thomas and Taylor Patents disclose a drug container having a reservoir adapted to contain a selected substance and an outlet port that allows the substance to exit the reservoir during an injection, wherein said the drug container comprises a syringe having a generally flat body portion that at least partially surrounds the reservoir, the body portion and the reservoir being made from two sheets of thermoplastic material such that side walls of the reservoir are selectively deflectable toward each other to expel a substance from the reservoir during an injection; a needle in fluid communication with the outlet port, the needle having a forward end that is adapted to penetrate the skin of an animal. The Thomas and Taylor Patents do not disclose a limiter that surround the needle. However, use of limiters in combination with syringes is conventional in the art as evidenced by the teachings of Hjertman, et al., and Kling. The teachings of Hjertman, et al., and Kling clearly demonstrate that syringe designs using limiters are well known in the art. Accordingly, for a person of ordinary skill in the art, the modification of the syringe designs disclosed by Thomas and Taylor, to include

limiters at the distal end of the syringes would have been considered an obvious design choice.
